

OVERSEEDING NOTIFICATION

DATE: 9-3-10

SITE: Riverbend

PROPOSED WEEK FOR COMPLETION: 9-7-10

The thin and weak turf areas will be overseeded next week throughout the complex.

These overseeded areas will not be mowed until the newly seeded grass reaches an height of about 3 to 4".

You will observe a modified cutting pattern around these areas.

Thatch may be brought up to the surface during the seeding operation. Excess will be removed. Light accumulation of thatch will help the new seedlings develop in better conditions.

This service has been performed on your site every year and is completely similar to what was done the previous seasons.

Thank you for your comprehension.
